

This is the largest fire-resistant glass!

POLFLAM specializes in large-format fire-resistant glass. New upcoming solutions are systematically undergoing tests at notified laboratories. In 2016, symmetrical POLFLAM[®] glass in the EI 30 class, measuring 5900 x 3100 mm, was tested at the prestigious ift Institute in Rosenheim. Two years later, we tested glass panes of the same dimensions – but this time in vertical position!

POLFLAM EI 30

Only a few testing centres in Europe have a fire-test furnace with dimensions that allow testing of such large glass panes in the production of which POLFLAM specializes.

On 19 December 2018, a test of POLFLAM[®] glass, class EI 30, dimensions 3100 x 5900 mm in vertical position, was carried out in the Fire Testing Laboratory at the Construction Technology Institute in Pionki.
